On October 23, 2007, Manuel Aldan Sablan, Jr. submitted to a drug test at the U.S. Probation Office, which tested negative. However, the urine sample was subjected to a specific gravity test utilizing a refractometer because it appeared to be "diluted." The resulting specific gravity score was 1.0030, which is below the threshold of normal urine. The sample was sent to Kroll Laboratories Incorporated for confirmation testing. On October 26, 2007, the laboratory report confirmed that the urine sample was diluted, with abnormal specific gravity levels. On October 30, 2007, U.S. Probation Officer Melinda N. Brunson met with Mr. Sablan to discuss his noncompliance with drug testing. He was reminded, in accordance with the U.S. Probation Office's substance abuse testing policy, not to drink large amounts of fluids at least three hours prior to submitting to a drug test or reporting to the U.S. Probation Office.

With the exception listed above, Mr. Sablan has generally complied with conditions of supervised release. On October 15, 2007, he was progressed to the final phase of his drug treatment and testing program. Mr. Aldan completed his community service requirement on May 9, 2007, paid his special assessment fee on September 14, 2000, and submitted to a DNA sample of his blood on June 12, 2006. In addition, he has been employed with Jaguar Enterprises since December 2006.

This report is submitted for the Court's information only, and no action is requested at this time. Mr. Sablan has been warned that sanctions will result from any additional drug testing violations. His compliance will be closely monitored, and any subsequent violations will be reported to the Court accordingly.
